

Discussion Lec-Zero

1. What is the web development and what are types of it?

A/ Web development refers to the process of creating, building, and maintaining websites and web applications.

There are three main types of web development:

1-front end development

2-back end development

3-full stack development

2. What is difference between web developers and web designers?

A/ Web designers create a website's look and feel, and web developers create the code to make it work. Site designers and site developers often work together, but their job functions are different.

3.Is the best for web developer to be full stack development or just one type of development?

A/ Whether it's better for a web developer to specialize in full-stack development or focus on a specific type of development depends on various factors, including personal preferences, career goals, and market demand.
